

ABSTRACT OF THE DISCLOSURE

A device for lifting and otherwise manipulating large landscaping materials and other like objects. The lifting device generally includes a pair of arms pivotally interconnected to one another at a pivot joint, a separate shackle mounted to the upper end of each arm and a lift ring interconnected with the shackles. The lifting device may include laterally extending jaws affixed to the lower end of each arm. The arms may be generally "S"-shaped having a lower portion curving about a center on the interior side of the arm and an upper portion curving about a center on the exterior side of the arm.
